### REC\_DS using C\_Week 7\_COD\_Question 4

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### Section 1 : Coding

##### 1. Problem Statement

Develop a program using hashing to manage a fruit contest where each fruit is assigned a unique name and a corresponding score. The program should allow the organizer to input the number of fruits and their names with scores.

Then, it should enable them to check if a specific fruit, identified by its name, is part of the contest. If the fruit is registered, the program should display its score; otherwise, it should indicate that it is not included in the contest.

##### ***Input Format***

The first line consists of an integer N, representing the number of fruits in the contest.

The following N lines contain a string K and an integer V, separated by a space, representing the name and score of each fruit in the contest.

The last line consists of a string T, representing the name of the fruit to search for.

### **Output Format**

If T exists in the dictionary, print "Key "T" exists in the dictionary.".

If T does not exist in the dictionary, print "Key "T" does not exist in the dictionary.".

Refer to the sample outputs for the formatting specifications.

### **Sample Test Case**

Input: 2  
banana 2  
apple 1  
Banana

Output: Key "Banana" does not exist in the dictionary.

### **Answer**

```
// You are using GCC
#include <stdio.h>
#include <string.h>
```

```
#define MAX 20
#define STR_LEN 20
```

```
int main() {
    int N;
    char fruitNames[MAX][STR_LEN];
    int scores[MAX];
    char searchFruit[STR_LEN];
    int found = 0;
    scanf("%d", &N);
```

```
for (int i = 0; i < N; i++) {  
    scanf("%s %d", fruitNames[i], &scores[i]);  
}  
  
scanf("%s", searchFruit);  
  
for (int i = 0; i < N; i++) {  
    if (strcmp(fruitNames[i], searchFruit) == 0) {  
        found = 1;  
        break;  
    }  
}  
  
if (found)  
    printf("Key \"%s\" exists in the dictionary.\n", searchFruit);  
else  
    printf("Key \"%s\" does not exist in the dictionary.\n", searchFruit);  
  
return 0;  
}
```

**Status :** Correct

**Marks :** 10/10
